

AFTERCARE GUIDE

Maintain the look, feel, and longevity of your extensions with proper care.

1

WASHING & PRODUCTS

- Avoid washing your hair for 24 hours after installation.
- Use only S1 / Seamless1 approved products, specially formulated to maintain the integrity of the tape and bonds while nourishing the hair.
- Apply **shampoo** to the roots, and **conditioner**, **mask**, **serum**, and **leave-in cream** from mid-lengths to ends, avoiding the tape area.

2

STYLING & HEAT

- Always dry the tape area thoroughly after washing your hair.
- Heat styling is suitable; however, avoid applying heat directly to the tape area (no hotter than 180°C).

3

BRUSHING & DAILY CARE

- Because these are real human hair extensions, brush them gently using a soft bristle brush. Use our **Care Brush** on wet or damp hair, and our **Dry Brush** on dry hair.
- Always brush before and after washing, in small sections.
- When wet, the bonds are more vulnerable, so handle the hair with extra care to avoid slipping.
- Daily use of S1 **serum** is highly recommended to keep the hair nourished and healthy.

4

LIFESTYLE & PROTECTION

- It's best to plait or braid your hair before sleeping to prevent tangling.
- Avoid going to bed with wet hair.
- Chlorine, spray tan, salt water, and sunscreen can affect the extensions.
- Rinse your hair immediately after exposure and apply **conditioner** or a **mask** beforehand for optimal protection.

5

MAINTENANCE

- Maintenance appointments are required every 6–10 weeks.
